DETAILED ACTION

Specification

1. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.
2. The following guidelines illustrate the preferred layout and content for patent applications. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

The following order or arrangement is preferred in framing the specification and, except for the reference to "Microfiche Appendix" and the drawings, each of the lettered items should appear in upper case, without underlining or bold type, as section headings. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) Title of the Invention.
- (b) Cross-References to Related Applications.
- (c) Statement Regarding Federally Sponsored Research or Development.
- (d) Reference to a "Microfiche Appendix" (see 37 CFR 1.96).
- (e) Background of the Invention.
 1. Field of the Invention.
 2. Description of the Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) Brief Summary of the Invention.
- (g) Brief Description of the Several Views of the Drawing(s).
- (h) Detailed Description of the Invention.
- (I) Claim or Claims (commencing on a separate sheet).
- (j) Abstract of the Disclosure (commencing on a separate sheet).
- (k) Drawings.
- (l) Sequence Listing (see 37 CFR 1.821-1.825).

Claim Rejections - 35 USC § 102

Claim Rejections - 35 USC § 102

Art Unit: 2834

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

4. Claims 1-6 and 8-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Ohashi et al..

Ohashi et al. disclose an electric machine construction comprising a stator space defined by a shell (50) and end portions (52) at both ends of the shell, the ends including a support (4) for an attachment on power output shafts (6), a stator (15) and rotor (20) having a first end and a second end disposed within the space, comprising at least one cooling medium inlet opening (34) in the shell and positioned intermediate the ends of the rotor, a suction means (5) at the vicinity of both end portions of the stator space for providing suction for drawing cooling medium into the stator space, wherein the arrangement is such that the cooling medium is drawing by the suction into the stator space.

Regarding claim 8-11, the method therein is inherent given the apparatus of Ohashi et al.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2834

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 7 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohashi et al. in view of Sheerin, as apply to claim 1.

Ohashi et al. disclose essentially claimed invention except for a heat exchanger.

Sheerin discloses a heat exchanger (24) provided within a space (108) between the outer surface of a shell (20) and the outer housing (40) for the purpose of cooling.

It would have been obvious to one of ordinary skill in the art at the time the invention was made utilize the combination structure of the machine as taught by Ohashi et al. and modify the heat exchanger structure of Sheerin to accommodate the stator shell of Ohashi et al. to provide an electric machine with an improvement in cooling and prevent overheat of the machine.

Regarding claim 12, the method therein is inherent given the apparatus of Ohashi et al. in view of Sheerin.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
